

Dear Sir

Firstly, thank you for your interest in relation to our new patented product Stayputt, (the UK's only **Cement Free**, permanent sand based polymerised jointing product).

In brief, Paul Darby LRSC (chemist) and I invented this product some four years ago and now after trials, modifications and armed with world wide patents it has taken us this long to be in a position to bring this product to market as a proven permanent sand based **Cement Free** flexible jointing product.

Paul Darby and I are directors of Stayputt (UK) Ltd, and our sister company, Advanced Surface Products (UK) Ltd, a company that manufactures specialist sealers for block paving, clay paviors, pre-cast concrete slabs, pattern imprinted concrete and any hard landscaping product used for drives, patios, footpaths in any residential and commercial application. We also specialise in bespoke paint manufacture for general industry at our 20,000 sq ft premises based in Cradley Heath in the West Midlands.

Between us we have some 20 years of experience in the hard landscaping industry and for a long time we have felt that the market place has been lacking in a user friendly, eco friendly **Cement Free** product that is safe and easy to use.

Could we ask you a question?

**ARE YOU AWARE OF THE HAZARDS OF CEMENT?
DO YOU VALUE YOUR HEALTH AND THE HEALTH OF YOUR WORKFORCE?**

Ok, that's 2 but **research does prove that extended periods of exposure to cement dust can cause problems with skin, eyes and lungs and can also cause allergic reaction.** That is why we developed Stayputt.

We believe it is a unique product owing to the fact that:

- a. It is **Cement Free**
- b. It stabilises joints and resists paving movement, therefore retains the integrity of the paving.
- c. Inhibits moss, weed and algae growth.
- d. Easy to apply as normal kiln dried jointing sand.
- e. Non-staining.
- f. Resists wash out, town sweepers and vacuums.
- g. Fills gaps and joints down to 2mm and up to 10mm.
- h. Is not moisture sensitive therefore has an exceptionally long shelf life in dry conditions.
- i. Easy to use, no special skills or tools required, simply a broom, hose pipe with spray attachment or watering can.

The product should not be applied in temperatures below 5°C because a process of moisture evaporation is required to cure.

The product comes in 15kg polytubs. It is not vacuum packed and has a shelf life of over 12 months in dry conditions. In relation to distribution our system at the works is designed to load one pallet at 1200mm by 1000mm dimension with 50 units on a pallet, total weight at 1000kg.

Hoping that this information gives you an overview of ourselves, our unique product and our business we look forward to the possibility of speaking with yourselves in the very near future should you have any questions or enquiries. Please phone for a free information pack.

With Regards

John T Liddy
Director
